Janice King's Professional Introduction

Hello World!

Hello Everyone 👋

My Name is Janice King and a little bit about myself I am a I.T. support student at Merit America expected to graduate September 2021. I Also serve in the military with the US Army Reserves and my specialty job is Human Resources (HR) and administrative it is all office jobs and this allowed me for the past 13 years to encounter a variety of technology and electronic devices some of them being very challenging and intimidating, not having computer technology background plus the need of troubleshooting some devices on a daily basis is where my interest on technology and computer science started to develop. My goals after graduation is to have a solid foundation framework on computer science to achieve a specialty major in cybersecurity and artificial intelligence (AI) and make a contribution to develop and encourage safe practices in the creation of new AI technology and that's what brings me here today.
